EDUCATION

Georgia Institute of Technology , Atlanta, Georgia <i>Master of Science in Computer Science</i>	<i>Aug '19 - May '21</i>
International Institute of Information Technology (IIIT-H) , Hyderabad, India <i>Bachelors of Technology in Computer Science and Engineering (Honors in Computer Vision)</i>	<i>Aug '15 - May '19</i> GPA: 8.41/10.0

TECHNICAL SKILLS

Programming Languages	Python, C, C++, MATLAB, Bash, Java, HTML, CSS, JavaScript
ML/DL/CV	PyTorch, Keras, TensorFlow, OpenCV, scikit-learn, scikit-image
Other Libraries and Tools	Git, LaTeX, OpenGL, WebGL, SQL, PyGame

EXPERIENCE

Graduate Researcher - Center for Behavioral Imaging , Georgia Tech • Working on incremental learning for 3D object recognition with Prof. James M. Rehg.	<i>Aug '19 - Present</i>
Research Intern - Computer Vision Center , Universitat Autònoma de Barcelona • Worked on unsupervised domain adaptation for end-to-end imitation learning for autonomous driving. • Implemented CycleGAN, UNIT, WDGRU and LSD-seg based methods for domain adaptation. • Trained models in PyTorch and CARLA Simulator, deployed in real world using Jetson TX2 and Raspberry Pi.	<i>May '18 - July '18</i>
Undergraduate Researcher - Center for Visual Information Technology , IIIT-H • Developed a full binarization method for deep CNNs that attains an increase of upto 8% in accuracy and 21% in compression. • Developed a distribution-aware approach for binarizing deep CNNs that attains an increase of 2.5% in accuracy. • Created a style transfer based data augmentation method for spoof detection resulting in upto 3% increase in TDR.	<i>Mar '17 - Apr '19</i>
Teaching Assistant - IIIT-H • Courses: Computer Vision (Spring '19), Computer Graphics (Spring '18)	<i>Jan '18 - May '19</i>

PROJECTS

Eye Gaze Detection using Attention Modeling • Implemented a deep learning model that follows the gaze of people and identifies salient objects in an image. • The model does this by extracting head pose and gaze orientation of faces detected by a SSD detector.	<i>(PyTorch, Python)</i>
BrickBreaker, Bloxorz and 3D Aquarium • BrickBreaker and Bloxorz are 2D and 3D games respectively which incorporate physics, lighting and shaders. • Created a 3D Aquarium with lighting, bubbles, reflective glass and multiple kinds of fish.	<i>(C++, OpenGL, JS, WebGL)</i>
Sketch Based Image Retrieval • Implemented an edge grouping based SBIR system that uses a RankSVM, graph cuts, energy filtering and k-NN.	<i>(MATLAB)</i>
Reinforcement Learning Algorithms • Implemented sample efficient ACER, DQN, Double DQN, Policy Gradient and Actor-Critic agents.	<i>(PyTorch, Python)</i>
Digital Image Processing Toolbox • Implemented several algorithms for resampling, blending, transformation, restoration, compression and filtering.	<i>(MATLAB)</i>
